

OSM Team

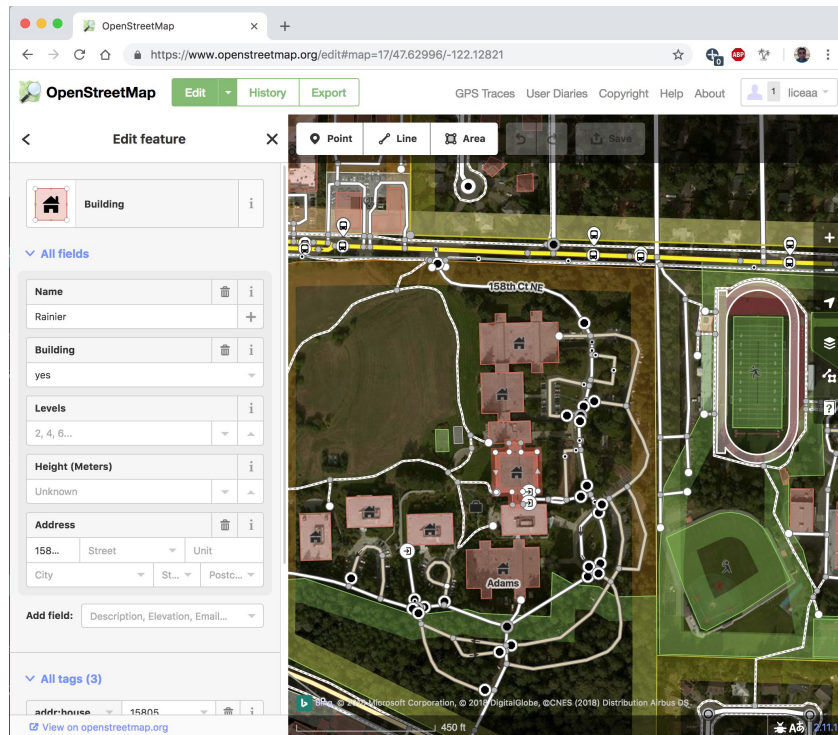

iD Editor

Introduction

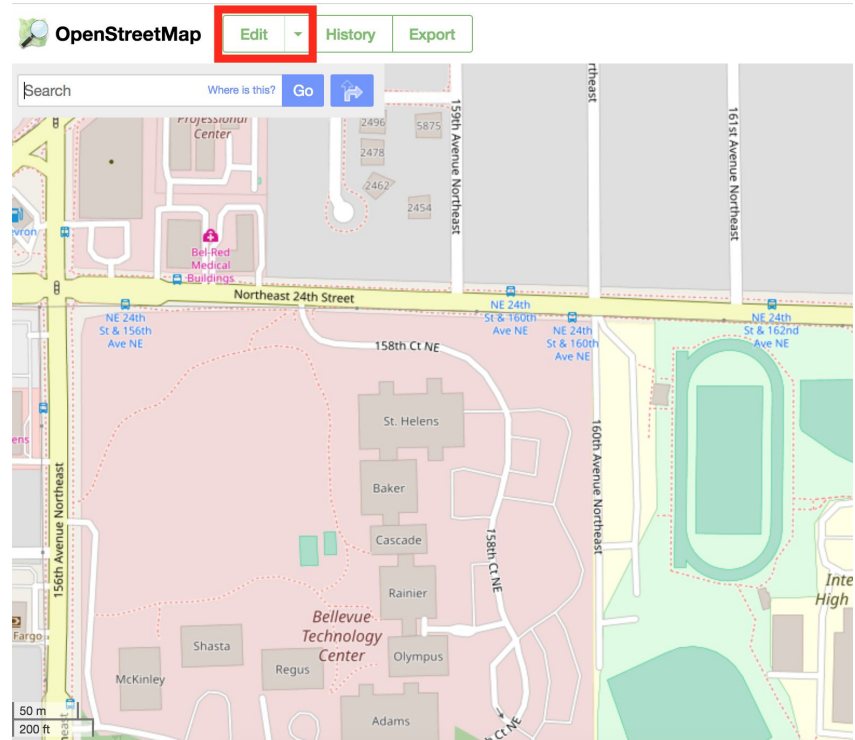

Overview

- iD editor is the in-browser default editor for the OSM project
- Accessible to anyone online with an OSM account
- Very good for basic editing of features
- Poor for detailed lane modeling

Setup

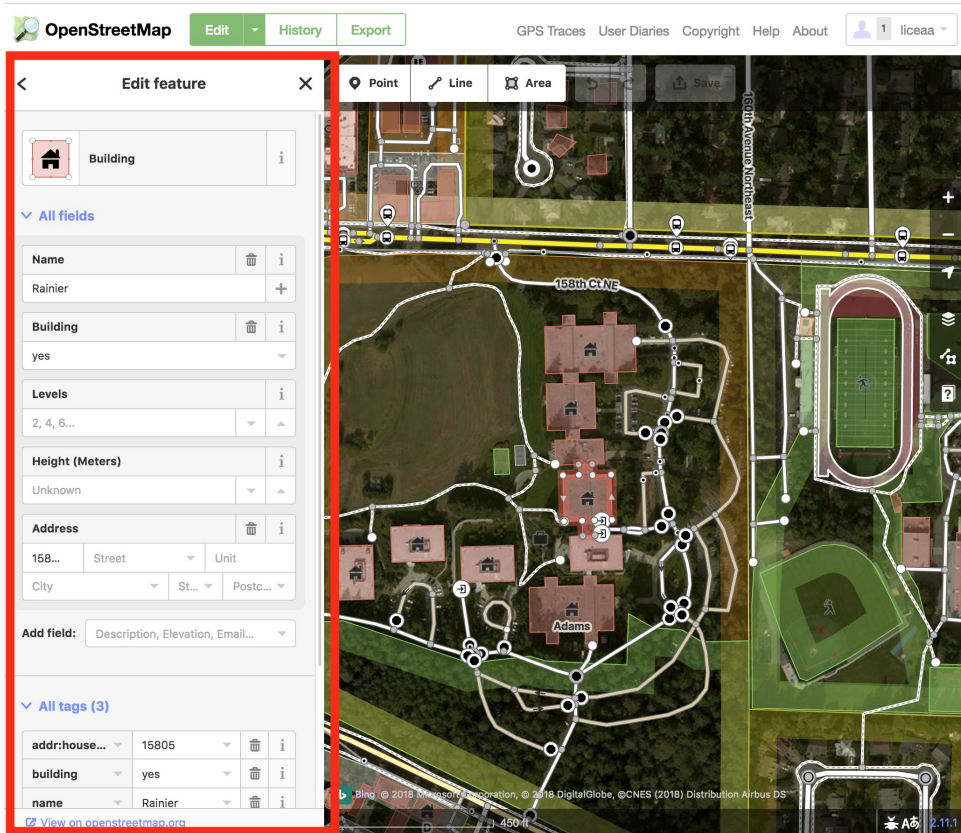

- There is now downloading or installation
- Accessible directly from <https://www.openstreetmap.org>
- The point of the editor is to be very user friendly

Layout

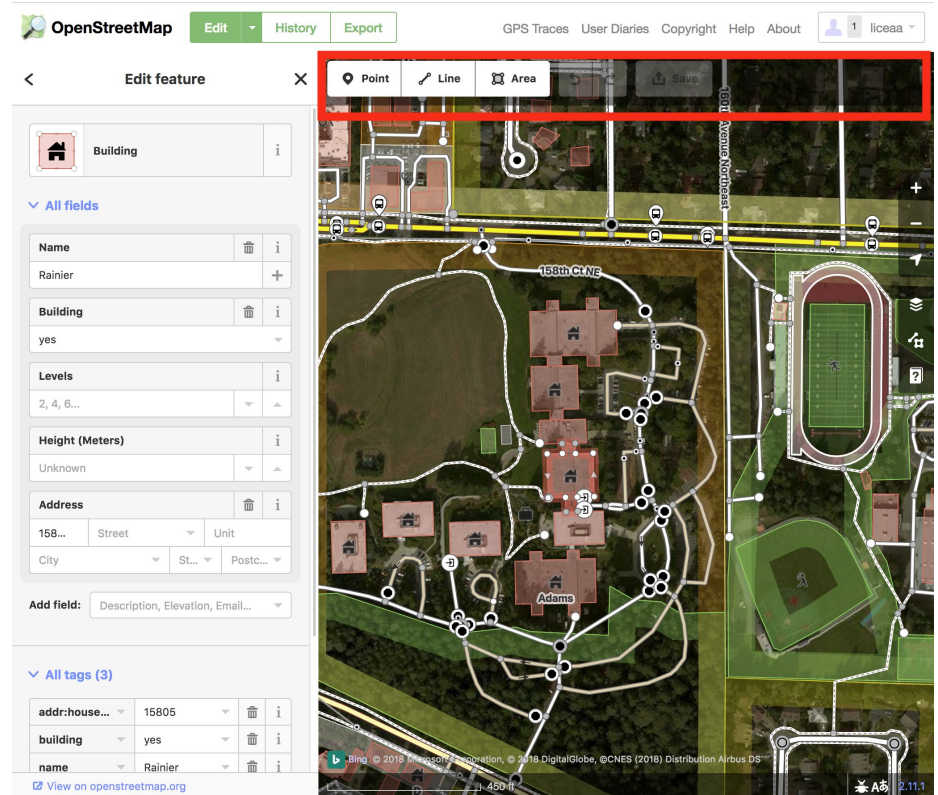

Edit Features Panel

- You can edit the keys and the values through here
- Contains presets for some of the most common tags
- There's also an option to manually input any value for everything else

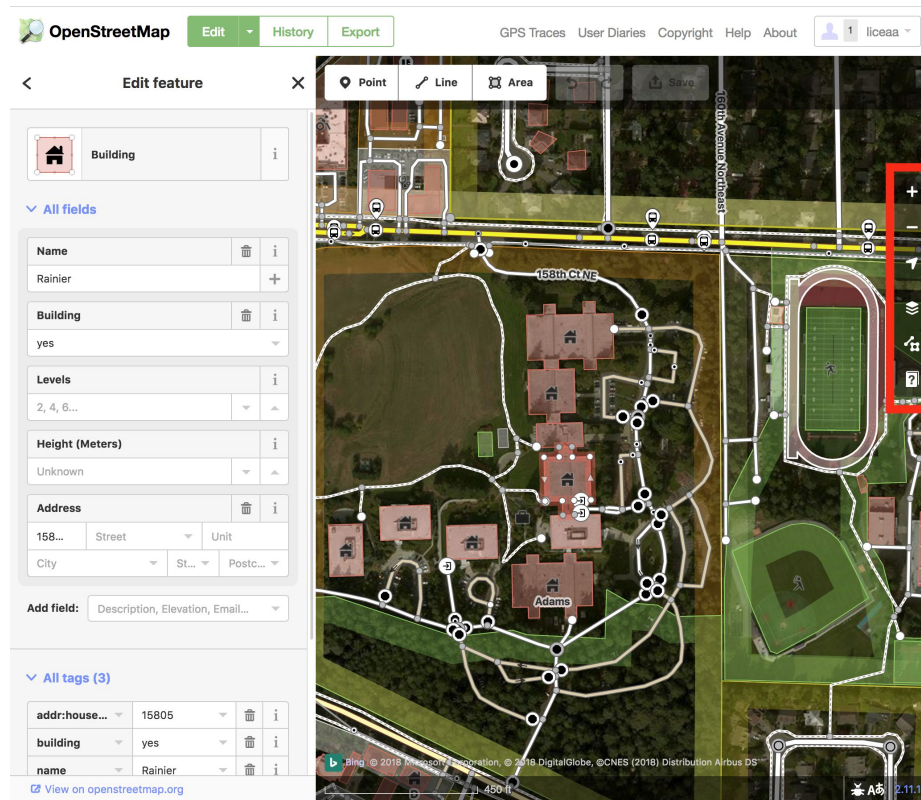

Toolbar

- Allows you to select the type of feature you want to add
- You can undo and redo steps
- Save button is also found here

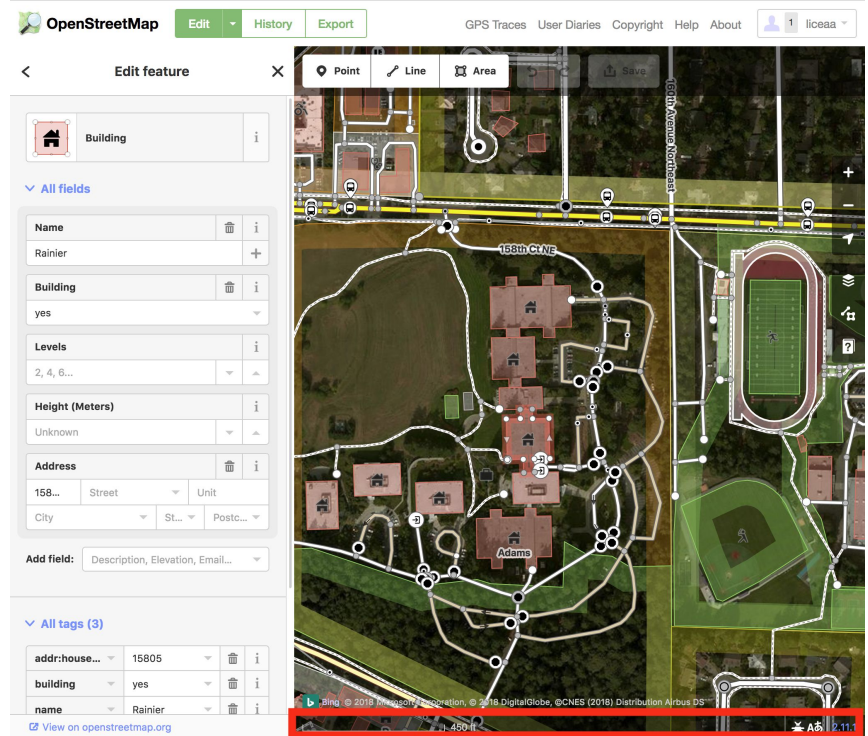

Map Panel

- Allows you to zoom
- You can toggle the visible features
- Change the background imagery

Information Panel

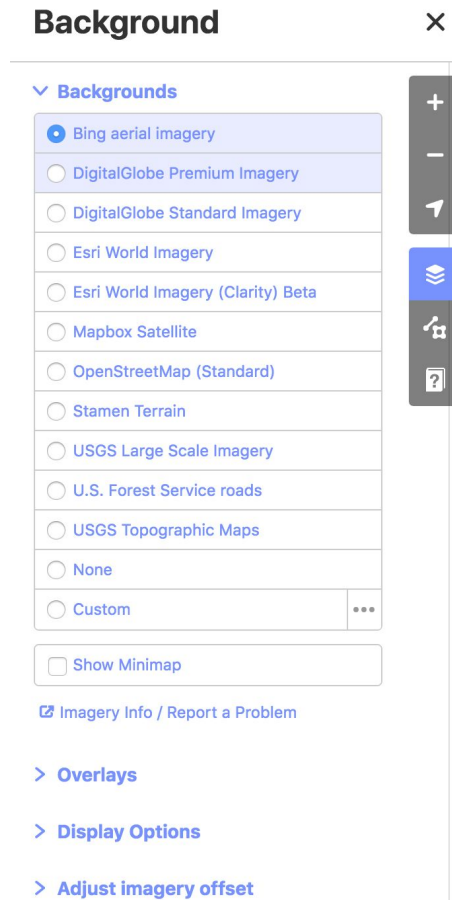

- Background Information
- Features
- Editors
- etc

Editing

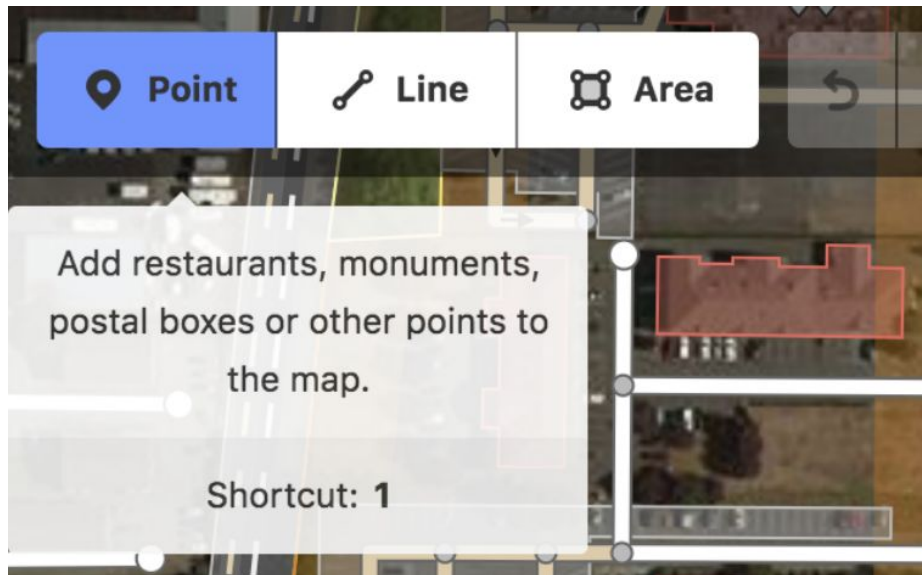

Changing the Background

- Done through the Map Panel
- Mapbox and DigitalGlobe Premium tend to have preference

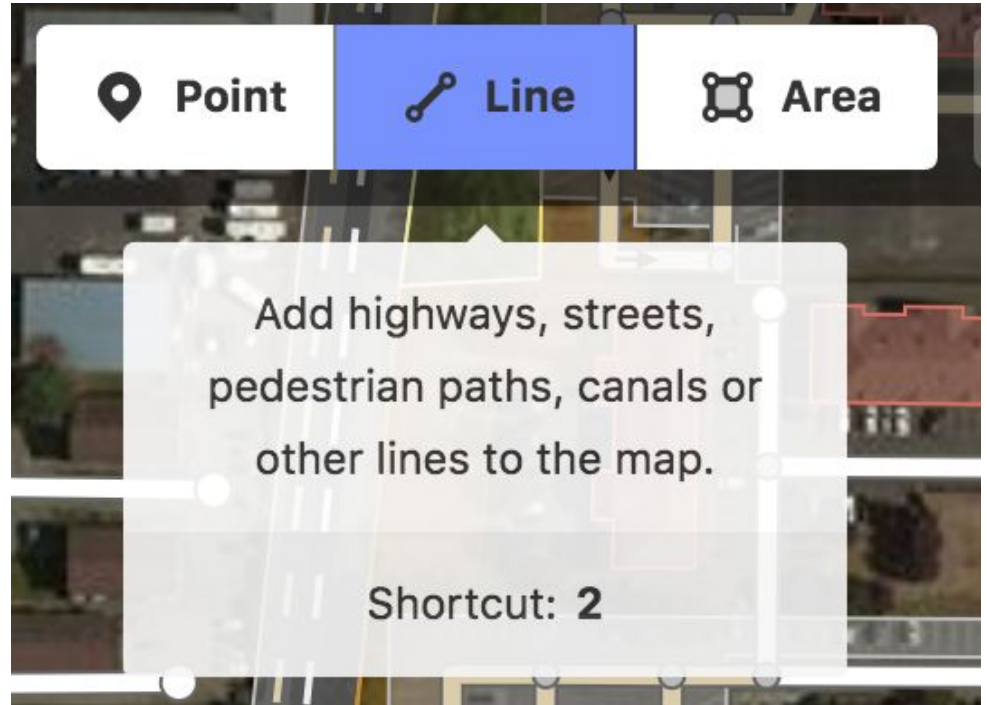

Adding Points

- This just drops an isolated point on to the map
- Then you automatically get a list of common tags associated with points, mainly POIs

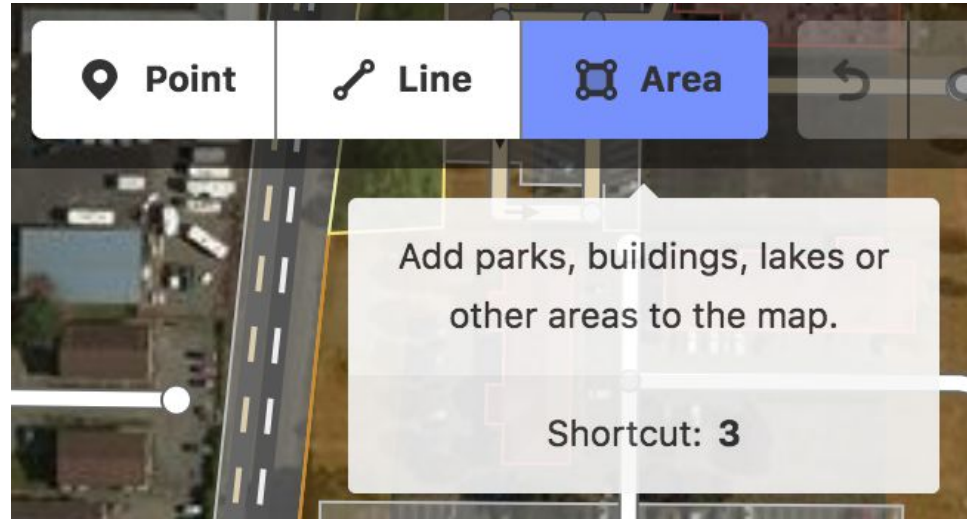

Drawing Lines

- Draws a line for you
- If you want to complete the line, double click on your final point
- If after drawing a line you click on your initial point, it closes the circuit

Drawing Shapes

- The circuit is closed by default
- Double click on your final point to finish
- Presets include a lot of building and land categories

Editing Tags

- Most of the features relevant to your work should be found in the defaults

< Edit feature ×

Uploading Your Edits

- A changeset is a comment summarizing what you are doing
- Changesets are always public
- Changesets should be concise but informative
- You also include your source in this step which is usually just the background imagery

Actual Changesets From This Office

Removed parking aisle tag.

Removed parking aisle tag.

Resolving issue with broken bus route along Hillview Avenue.
--

Removed driveway tag.

Removed driveway tag.

Updated lane directionality

added lane count to ways

Updated lane count.
