Agenda

- **Objective**
- **Speed Limits**
 - **Tags**
 - **Parameters**

Objective

Objective

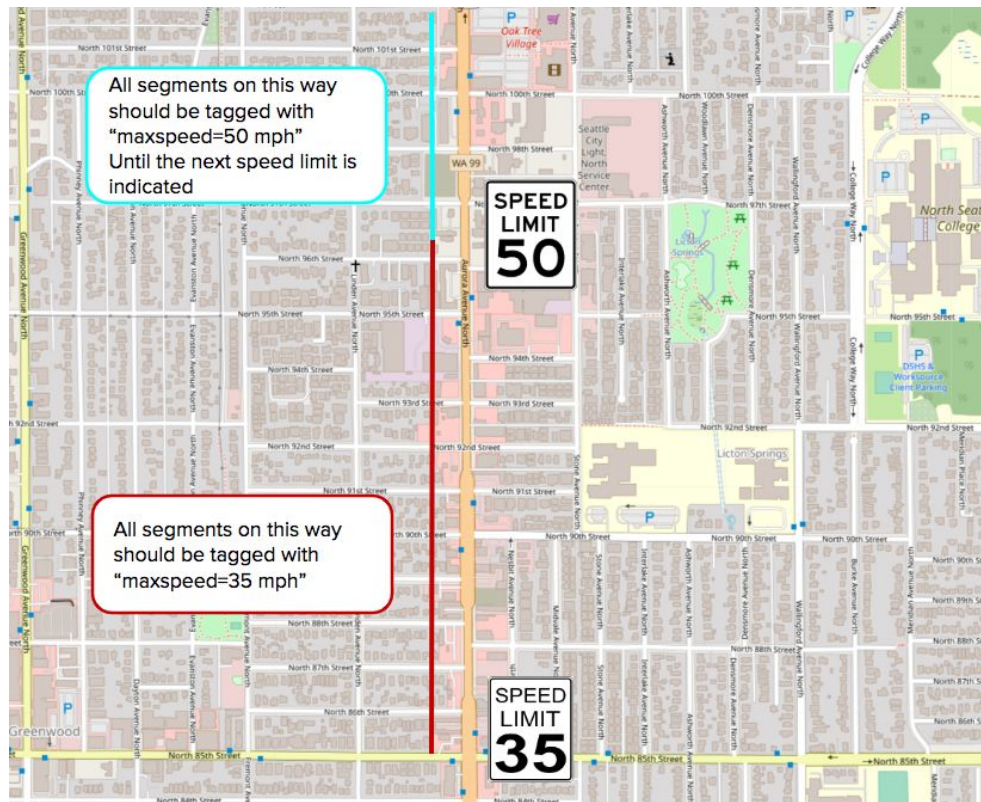

Gain a understanding of the tags needed to edit the speed limit in OSM.

Speed Limits

Speed Limit

KEY	Definition
maxspeed	The value, numerical value + space + unit. Example: 'maxspeed=50 mph'
maxspeed:backward	In rare cases where ways have a speed limit that depends on the way direction, use this tag.
maxspeed:forward	In rare cases where ways have a speed limit that depends on the way direction, use this tag.

Speed Limits

Tagging Parameters:

1. The only two sources of speed limit information that will be used are speed limit signs and speed limits painted on roadways.
2. Maintain a speed limit tag on a way until a different speed limit is indicated.
 - a. This rule includes maintaining speed limit tags on slip roads.
3. Only tag max speed information from **white** regulatory speed limit signs. Do *not* add max speed tags from yellow advisory signs as these are considered recommendations.

Thank you
